

AA2

Our door into the world of the horn.

This loudspeaker invites us to reflect on the original two way sound system from a different point of view, a horn with dipole. With a generous output, the AA2 allows a great number of configurations of pentode, triode or transistor valves. Cohesion and ease are its most outstanding qualities.

Technical specifications.

Description:	High efficiency 2 way speaker.
Response frequency:	40hz-20khz.
